Display Data Use Case

Name

Display Data

Description

Allow user to view workout data within the application.

Actors

User, application

Flow

Once a user has imported some workout data, a table containing all workout data ever imported will be displayed. The user will then be able to use the calendar widgets to select 2 dates. The table will then show all workout information logged between these dates.

Alternate Flow

a) The user will not be able to use the calendar widgets unless they have already imported some workout data.
b) If the user selects a "start" date that comes after the "end" date, an error will be displayed to the user, asking them to select different dates.

Preconditions

1) The user has imported some workout data
   a) The user has selected valid "start" and "end" dates

Postcondition

The user will be able to view their workout data in a table.
